DETAILED ACTION

Acknowledgement of Preliminary Amendment

1. The preliminary amendment of February 12, 2002 canceled claims 2-5 and 13-22 and added claims 23-34. Accordingly, the claims under consideration are claims 1, 6-12 and 23-34.
2. As noted in the Remarks, the claims of the present application correspond substantially to those in previously allowed parent Serial No. 09/616,866, now abandoned. Upon review and reconsideration of record, however, the following new ground of rejection is seen necessitated.

Obviousness-type Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1, 6-12 and 23-34 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-15 of parent U.S. Patent No. 6,132,758. Although the conflicting claims are not identical, they are not patentably distinct from each other because no patentable difference is seen in the present stabilized antihistamine

Art Unit: 1624

syrup (descarboethoxyloratadine with an aminopolycarboxylic acid) compared to the stabilized antihistamine syrup of the patent (loratadine with an aminopolycarboxylic acid). Note that the present specification acknowledges the close structural and functional relationship of the two antihistamines, the present descarboethoxyloratadine being an antihistaminic active metabolite of loratadine. It would be expected that a stabilizer for one would be a stabilizer for the other.

Allowable Subject Matter

5. The present antihistaminic syrup stabilized with an aminopolycarboxylic acid is neither disclosed nor taught in the prior art. See, also, the discussion in the prosecution of the parent patent.
